16 BIG ADVANTAGES

The Other Guys Just Don't Have!

Westendorf loaders are known for their many advantages – but the proof is in their performance. A Westendorf will do everything you want a loader to do, and more. Maneuver better! Load more! Dump higher! Work Faster! The styling of Max not only has an undeniable WOW factor, but the intelligent design offers unsurpassed quality, performance and strength.

The new patent-

ented Smart-Pac cylinder eliminates all external hoses and lines offering you a cleaner appearance and longer hydraulic life in your loader. The patented swaged barrel automatically compresses the seals past the barrel's edge during assembly for consistent quality every time. The hidden hydraulics are secured behind a sculptured jacket that looks great and protects the lines with style.

Famous for bigger, stronger and cleaner bucket designs, Westendorf understands how to build a bucket that stands up and lasts. A tapered, rib-free interior empties quickly without sticking and is reinforced externally for added strength.

Our experience has taught us, the double tapered arm is the key to superior arm strength. An interior I-beam inserted in the arm positions the steel where it really matters most.

Obvious features such as the Flat Face Hydra-Snap™ and Remote Control Couplers are impressive time-savers, but the smaller details are what really make a difference for long term reliability and performance. Large, heavy-duty grease-from-the-end pins with 2-sided locks, integrated grill guard, rotational bucket level indicator, power-linkage, high energy decal package, and an optional synchronizer bar are just a few.

The Max loader offers a wide variety of integrated functions such as the easy to read rotational bucket indicator, 3rd function capability for any hydraulic attachment with the push of a button, and the comfort ride system to reduce operator fatigue and equipment wear.

When paired with the ability to change implements from the cab, the wide selection of buckets, spears, grapples, blades, plows and specialty attachments makes the Max Loader your one stop shop for your material handling solutions. Max will speed up your day-to-day operations saving you time and money.

The new remote control coupler changes attachments with a push of a button. With every use, you'll smile and pat yourself on the back for making a smart, value based purchase. Then smile a second time because you're in the cab and not in the sweltering heat or below zero temperatures trying to hammer out pins or pry up levers when you need to switch attachments.

Enjoy the freedom of mounting the Max loader from the comfort of your cab. Just drive in and the loader automatically Smart-Locks to the tractor. No Stands. No Time. No Tools. No Pins required.

The new Smart-Lock, solid mount bracket system simply rotates over the tower, self-locking the loader in place with a MAX Grip. Smart-Lock is a self-aligning and self-tightening system; the more you use the loader the tighter the connection becomes. The brackets are precisely engineered for a consistent and tailored fit to your tractor, making the MAX package very comfortable to work with.

Hooking up hydraulic hoses is simple and clean with the patented Flat Face Hydra-Snap™. Connect your hoses AND electronics with one, easy-to-operate comfort grip handle. Keep the connections clean with the built-in dust cover, and the parking plate provides convenient storage too.

The Max loader fits properly with the bucket close and arms that compliment the tractor's hood contour. It features hidden hydraulic hoses inside the arms, not only suppressing wear, but allowing for unencumbered visibility that no other loader comes close to offering.

Experience the tire freedom your tractor was designed with and keep fenders on most tractor models with optimum row settings to maximize your turning and oscillation ability.
